MY | HERITAGE. FUTURE. APOLLO.

For over 30 years, Apollo has been creating bicycles for the Australian and international marketplaces that are synonymous with performance and quality. We have continued to achieve this by utilising the latest technologies in manufacturing while focusing on product innovation and development.

Every Apollo model is uniquely designed and developed by our in-house product development team at our Australian headquarters. Australia hosts some of the toughest and most diverse terrains in the world and every bicycle we develop is specifically designed and tested to excel in these demanding and competitive conditions. This approach and our passion for cycling, has allowed Apollo to tailor our bicycles for riders around the world who are passionate about their equipment and demand nothing but the best.

The new 2011 range is the latest highlight in our proud history. Through experience and evolution we have delivered our strongest range of bicycles ever, complimented by the introduction of several new models tailored specifically for emerging markets. Whether you are the leader in the breakaway, the commuter in the city or even the weekend warrior on the trails, Apollo's new range has been designed for you. Test ride an Apollo today.

MY | TEAM. PASSION. APOLLO.

Apollo's history showcases a record of passionately supporting competitive Australian cycling and its athletes at all levels. Our aim is to provide aspiring Australian cyclists with the opportunities and means to progress and achieve their goals on world-class products.

Our commitment to this sport and these athletes has proved invaluable with the feedback and

product testing they provide Apollo in return. This feedback helps us improve the design and development of our products, while giving our athletes a competitive edge.

Apollo's team has an extensive honour roll including champions such as Cadel Evans and Eddie Salas (9 times Australian Road Champion). We are proud the Apollo Team currently

encompasses riders across multiple disciplines, including the Womens Prime Estate Team, triathletes competing on the world stage and upcoming Road and MTB champions.

Stay up-to-date with the Apollo's Team including photos, race reports and the latest results all at apollobikes.com/team

ARCTEC R 700C ROAD - 20 SPEED

FRAME	FORK	DRIVETRAIN	COMPONENTS	WHEELS	FEATURES	WEIGHT
NEW Arctec super light carbon monocoque frame with offset seat tube, box technology down tube, BB30 bottom bracket, S.L.I.M. seatstays, asymmetric chain stays, tapered head tube 1-1/8 to 1-1/4 fittings	NEW Arctec oversize full monocoque carbon fork with carbon blades, steerer, crown, dropouts and tapered steerer	BB30, complete SRAM Red group with SRAM Quarq Powermeter option, 53/39T chainrings	Easton EC90 SLX3 carbon bar, Easton EA90 stem, Easton EC70 carbon post and Prologo Scratch Pro saddle	NEW Easton EC90 SL carbon clincher 38mm deep wheelset with precision ceramic sealed bearings and Sapim CX-ray spokes	Prologo plaintouch cork tape and Michelin Pro3 Race tyres	6.4kg

AVAILABLE AS FRAMESET

THE FRAME

The Arctec R and Elite are Apollo's lightest and stiffest frames ever, featuring a truly asymmetric design. In essence this frame has been designed in two halves. An oversize bottom bracket, offset seat tube and chain stays both of different diameters ensure maximum power is transferred to the rear wheel.

To balance this rigidity we employed super slim seat stays which deliberately provide an element of vertical flex to the frame. This not only delivers a comfortable ride but ensures that the rear wheel stays glued to the ground during sprinting or high speed cornering when pushing to the absolute limit.

CARBON CONSTRUCTION

Different types of carbon offer different characteristics. Some of the lightest, most expensive carbons aren't actually the best for adding strength to a frame. Our frames blend ultralight UD carbon with 12k weave in high stress areas to optimise the frame's strength.

These stress areas are further reinforced by step down technology - a process that ensures the carbon is perfectly positioned to create a highly refined frame quality. The result is a frame with excellent strength to weight ratio.

ELITE 700C ROAD - 20 SPEED

FRAME	FORK	DRIVETRAIN	COMPONENTS	WHEELS	FEATURES	WEIGHT
NEW super light carbon monocoque frame with offset seat tube, box technology down tube, BB30 bottom bracket, S.L.I.M. seatstays and asymmetric chainstays, tapered head tube 1-1/8 to 1-1/4 fittings	NEW Arctec oversize full monocoque carbon fork with carbon blades, steerer, crown and dropouts tapered steerer	BB30, complete SRAM Red group, 53/39T chainrings	Easton EA70 bar, Easton EA70 stem, Easton EC70 carbon post and Prologo Scratch Pro saddle	NEW Factor carbon 58mm deep clincher wheelset with Japanese precision sealed bearings and Sapim spokes	Prologo Plaintouch cork tape and Michelin Pro3 Race tyres	7.2kg

Super slim stays provide balance to the ultra stiff chain stays by allowing for some vertical flex in the frame. These stays do not affect the overall rigidity of the ride and actually enhance grip during descents and cornering at high speed.

BB30

BB30 delivers unparalleled advantages over standard cranksets. The oversize axle increases the crank's torsional rigidity and allows for oversized bearings to mount directly into the frame without the extra weight of a bottom bracket shell. The result is a lighter and narrower crank setup, which positions your feet closer together. This narrower Q factor is a more bio-mechanically efficient position, which increases power output.

ULTRA 700C ROAD - 20 SPEED

FRAME	FORK	DRIVETRAIN	COMPONENTS	WHEELS	FEATURES	WEIGHT
Apollo custom made Hi-Modulus carbon fibre monocoque frame with integrated head tube, reinforced bottom bracket area and twin wishbone rear stays	Carbon oversize fork with carbon steerer, fully integrated	Complete Shimano Ultegra group, 52/39T chainrings	Easton EA70 bar, Easton EA70 stem, Factor carbontech carbon post and Prologo Scratch Pro saddle	Easton EA70 26mm deep wheelset with precision sealed bearings and Sapim double butted spokes	Prologo Plaintouch cork tape and Michelin Lithion2 tyres	79kg

 AVAILABLE AS FRAMESET

Apollo's custom monocoque frames are engineered for the ultimate blend of weight, performance and reliability. The Hi-modulus carbon lay up is crafted to specifically target key stress areas such as around the bottom bracket junction. This helps to deliver maximum torque from the pedals through to the rear wheel without adding unnecessary weight in other areas. All our carbon frame designs are then run through fatigue and impact stress tests to ensure the highest standards of reliability and durability. The result is an outstanding frame with superb acceleration and responsive handling characteristics.

VISPO 700C ROAD - 20 SPEED

VOLTA 700C COMMUTER - 20 SPEED

FRAME	FORK	DRIVETRAIN	COMPONENTS	WHEELS	FEATURES
Hi-Modulus carbon fibre modular monocoque frame with integrated head tube and wishbone rear stays	Carbon oversize fork with alloy steerer, fully integrated	NEW Shimano 105 group, compact 50/34T chainrings and Shimano 10 speed flat bar shifters	Easton EA30 bar, Easton EA30 stem, Factor carbon post with alloy seat clamp and Apollo saddle with synergy core	Shimano R500 wheelset, Michelin Lithion tyres	Tektro Dual Pivot brakes

Apollo's custom monocoque frames are engineered for the ultimate blend of weight, performance and reliability. The Hi-modulus carbon lay up is crafted to specifically target key stress areas such as around the bottom bracket junction. This helps to deliver maximum torque from the pedals through to the rear wheel without adding unnecessary weight in other areas. All our carbon frame designs are then run through fatigue and impact stress tests to ensure the highest standards of reliability and durability. The result is an outstanding frame with superb acceleration and responsive handling characteristics.

SPIN 700C COMMUTER - 27 SPEED

FRAME	FORK	DRIVETRAIN	COMPONENTS	WHEELS	FEATURES
Hi-Modulus carbon fibre modular monocoque frame with integrated head tube and wishbone rear stays	Carbon oversize fork with alloy steerer, fully integrated	Shimano Tiagra group, 50/39/30T chainrings and Shimano 9 speed flat bar shifters	Easton EA30 bar, Easton EA30 stem, Factor carbon post with alloy seat clamp and Apollo saddle with synergy core	Shimano R500 wheelset. Michelin Lithion tyres	Tektro Dual Pivot brakes

TORSION CONTROL MONOSTAYS **TCM**

TCM are dynamically designed rear stays, shaped to provide additional rigidity along their length. A bulge along the centre of the seat stay where the tube is most likely to flex enhances torsional strength and stiffness thus enhancing cornering and braking performance.

SLH TRIPLE BUTTED

SUPER LIGHTWEIGHT HYDROFORMED TUBING

Further upgraded for 2011, Apollo's 6061 super lightweight aluminium frames feature hydroformed, triple butted tubing, delivering our lightest, strongest and most responsive frames ever. The tubing is shaped in such a way that the widest, thickest part of the tube is closest to the weld joints. The resulting oversized tube junctions substantially increase lateral strength. Along the length of the tube the wall thickness decreases toward the central section the tube where the wall is incredibly thin and superlight.

6061
LIGHTWEIGHT TUBING

Utilising multi-shaped and formed tube sets allowed our designers to create a frame that is both lightweight and aesthetically pleasing. The curved top tube in particular redirects stress away from the head tube and seat tube junction and adds an element of compliance to the ride. Similar shaping of the oversize down tube ensures the ride is rigid and responsive. Take a further look at our Cross bikes and you can see how the array of tube shapes mould seamlessly into a light weight frame that is both functional and striking.

 AVAILABLE AS FRAMESET

ICC INTEGRATED CARBON CORE

The carbon centre of this frame showcases our technology at its best. By using advanced high modulus carbon lay ups we have been able to eliminate heavy alloy linkage points which would normally require lots of welding. All of these parts are seamlessly blended in carbon allowing us to make substantial weight savings of around 300g per frame. The carbon top tubes also provide material specifically where it is needed most resulting by increasing the stiffness through the seat tube junction and into the rear stays.

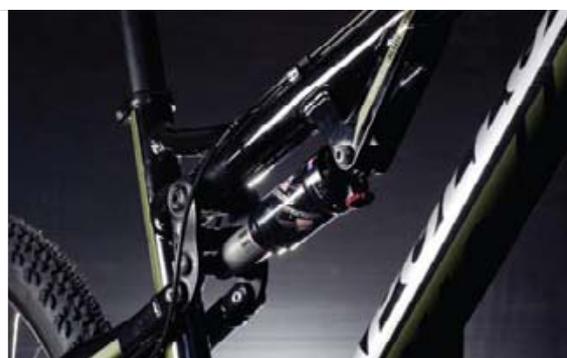

TERRA 10 26" (65CM) DUAL SUSPENSION - 20 SPEED

SPT • SINGLE PIVOT TECH

Shock technology and frame design improvements have come so far in recent years that for short travel applications the single pivot design offers substantial advantages. A single pivot frame requires less linkages and contact points resulting in a lighter frame with less maintenance. Fewer pivot points also mean there is less flex in the rear end when cornering and descending. This system also ensures that there is less that can go wrong, which typical of many overly complicated systems. Short travel frames are designed to be ridden fast. Our single pivot design skims over the top of obstacles and tracks faster over bumps than many other suspension designs. The rear shock is custom tuned to achieve an ideal travel path therefore limiting chain growth and preventing pedal induced bob.

NEW 6061 Ultralite alloy 29er frame with hydroformed taper technology and integrated head tube

FORK

Rock Tora TK 29 fork, 100mm travel, coil spring, alloy crown and lowers with remote PopLoc

DRIVETRAIN

Complete NEW SRAM X7 group, 3 x 10 speed with 44/33/22T chainrings

COMPONENTS

Easton EA30 bar, Easton EA30 stem, Easton EA30 post and Prologo Vertigo saddle

WHEELS

Alex ID-19 double wall alloy rims and alloy hubs, Kenda small block eight tyres

FEATURES

Avid Juicy 3 hydraulic disc brakes

ARCTEC M 26" (65CM) MTB - 20 SPEED

FRAME

Apollo Hi-Modulus carbon monocoque frame with strengthened integrated head tube, torsion controlled monostays and reinforced dropouts

FORK

Rock Shox Sid XX fork, XX motion control with XX hydraulic lockout

DRIVETRAIN

Complete SRAM XX group, 2 x 10 speed with 42/28T chainrings

COMPONENTS

Easton EC90 carbon bar, Easton EA90 stem, Easton EC90 Zero carbon post and Prologo Scratch Pro saddle

WHEELS

NEW Easton EA90-XC UST tubeless wheelset, precision sealed bearings, Sapim double butted straight pull spokes, Tubeless Michelin Wild Racer tyres

FEATURES

SRAM XX carbon hydraulic disk brakes with Matchmaker and

AVAILABLE AS FRAMESET

Apollo's custom monocoque frames are engineered for the ultimate blend of weight, performance and reliability. The Hi-modulus carbon lay up is crafted to specifically target key stress areas such as around the bottom bracket junction. This helps to deliver maximum torque from the pedals through to the rear wheel without adding unnecessary weight in other areas. All our carbon frame designs are then run through fatigue and impact stress tests to ensure the highest standards of reliability and durability. The result is an outstanding frame with superb acceleration and responsive handling characteristics.

TEAM 26" (65CM) MTB - 20 SPEED

FRAME

Apollo Hi-Modulus carbon monocoque frame with strengthened integrated head tube, torsion controlled monostays and reinforced dropouts

FORK

Rock Shox REBA RL fork, 100mm travel with dual air, motion control, PopLoc remote and preload

DRIVETRAIN

Complete NEW SRAM X0 group, 2 x 10 speed with 39/26T chainrings

COMPONENTS

Easton EC70 carbon bar, Easton EA70 stem, Easton EC70 carbon post and Prologo Nago Gel saddle

WHEELS

NEW Easton XC wheelset with sealed bearings, Michelin Wild Racer tyres

FEATURES

NEW SRAM X-O disc brakes with Matchmaker, and Shimano M-520 clipless pedals

TORSION CONTROL MONOSTAYS **TCM**

TCM are dynamically designed rear stays, shaped to provide additional rigidity along their length. A bulge along the centre of the seat stay where the tube is most likely to flex enhances torsional strength and stiffness thus enhancing cornering and braking performance.

COMP X 26" (65CM) MTB - 20 SPEED

SLH *TRIPLE BUTTED*
SUPER LIGHTWEIGHT HYDROFORMED TUBING

Further upgraded for 2011, Apollo's 6061 super lightweight aluminium frames feature hydroformed, triple butted tubing, delivering our lightest, strongest and most responsive frames ever. The tubing is shaped in such a way that the widest, thickest part of the tube is closest to the weld joints. The resulting oversized tube junctions substantially increase lateral strength. Along the length of the tube the wall thickness decreases toward the central section the tube where the wall is incredibly thin and superlight.
