

ROAD

Whether you love to go out on the attack, open it up in the sprint or take on the next berg in the front group, an Apollo frame delivers an incredibly lively ride with astonishing handling. It all starts with our Arctec frame, optimised for performance and engineered to deliver the very best in frame technology, cutting edge materials and advanced construction techniques, which is why this is the frame of choice for the VIS cycling team.

Designed for riders who love riding fast and aspire to achieve the next dominant victory.

In 2011 Apollo teamed up with the VIS, an institute with a formidable reputation for developing Australia's future cycling stars.

Apollo is a proudly Australian bicycle company and wanted to play our part in supporting the development of some of Australia's best athletes. We felt that the performance benefits of our Arctec and Elite road and time trial frames could play a role in assisting the VIS achieve even greater success and in the process inspire others to get active and start cycling.

Apollo's managing director Simon Burke remembers when he was an athlete and how hard it was to get decent sponsorship opportunities and wanted to ensure our brand was giving our best young athletes every opportunity to achieve their goals.

The VIS stands as a leading provider of high performance sports programs and coaching staff offering pathways to go on to achieve National and International success. Apollo is immensely proud to be associated with an organisation who continues to achieve at the highest levels and develop the next champions of Australian cycling.

ARCTEC **R**

MONOCOQUE CONSTRUCTION

This construction method allows for different construction processes to be used on the chain stays and seat stays of an Apollo frame. A frame's stays are subjected to different loads and this technique ensures that each part is individually optimised to meet specific requirements.

WRINKLE-FREE MOULDING TECHNOLOGY

Limiting wrinkles and carbon folds is an essential ingredient in a quality carbon frame. Apollo uses a modular monocoque construction process that, combined with Polyurethane inserts, allows more control over complex frame junction points.

EPS TECHNOLOGY

Superior frame strength is achieved during the construction process when the carbon material can be precisely structured both inside and outside the assembly of complex shapes like bottom brackets and head tubes. Polyurethane inserts provide this temporary framework adding superb consistency with no wrinkles or excess resin.

ASYMMETRIC STAYS

Both chain stays are constructed differently to provide maximum power transfer. The drive side stay is taller with a higher carbon content concentrating strength where it is needed most for optimised power transfer.

NANO TUBE TECHNOLOGY

Microscopic CSCNT Nano particles are embedded in the raw carbon material and are readily dispersed into the carbon providing better interlaminar strength and better vibration absorption. The result is a stiffer frame that is more responsive and more comfortable allowing an athlete to ride at high speed for longer with less fatigue.

MULTI-WEAVE CARBON LAYUP

Every carbon frame in our range uses only the highest quality Japanese Torayca carbon raw materials. Different carbon grades have different attributes and by utilising various grades of raw carbon material in each frame we are able to maximise the attributes of these raw materials. For example, 60T carbon is incredibly light but not very strong. By using lightweight carbon along a tube's centre section intertwined with denser raw material in and around junction points we can maximise the stiffness to weight ratio. This is an extremely labour intensive construction technique that ultimately allows us to manipulate specific areas of the frame without adding extra weight.

Increases front end stiffness and provides improved steering precision.

Super slim mono-stays provide bump dampening compliance by absorbing vibrations coming up through the frame and guaranteeing a smoother, more comfortable ride.

INTERNAL CABLE ROUTING

ARCTEC **R**

TECHNOLOGY

The Arctec R is the most advanced carbon frame ever produced by Apollo. The super light modular monocoque carbon frame utilises a unique multi weave carbon construction technique further enhanced with CSCNT Nano technology.

This technique utilises ultra light 60T carbon to keep weight to an absolute minimum along the frame's centre section where less strength is required. 40T carbon wraps around the bottom bracket and head tube junction points where the frame requires the most strength. Other sections of the frame use a combination of both of these carbon fibre sheets together with 50T carbon.

These three different raw carbon materials all have their own advantages and when they are precisely laid up together in a specific way it allows for much greater control over the ultimate characteristic of each part of the frame.

This extremely labour intensive construction technique starts with the carbon raw material being impregnated with CSCNT Nano technology. These microscopic particles are readily dispersed into the carbon providing better interlaminar strength and better vibration absorption. The result is a stiffer frame that is more responsive and more comfortable allowing an athlete to ride at high speed for longer with less fatigue. The carbon material is then laid up around polyurethane inserts that provide temporary structure to create the framework of the tubeset. The carbon material is able to be controlled both inside and outside the frame as it is molded resulting in a frame with superb consistency and no wrinkles or excess resin.

ELITE 700C - 22 SPEED

OVERVIEW

The Elite's modular monocoque carbon frame uses a unique multi weave carbon construction technique, identical to that used on Arctec R.

When different types or raw carbon are precisely laid up in a specific way it allows for much greater control over the ultimate characteristic of each part of the frame whether it be stiffness, light weight or an ability to soak up road bumps.

The carbon material is then laid up around polyurethane inserts that provide temporary structure to create the framework of the tubeset. The carbon material is able to be controlled both inside and outside the frame as it is moulded thus resulting in a frame with superb consistency and no wrinkles or excess resin.

PRIME 700C - 22 SPEED DI2

OVERVIEW

Our Di2 specific modular monocoque carbon frame construction on the Prime uses a unique multi weave carbon construction technique. This technique utilises two different types of raw carbon which have their own advantages. When they are precisely laid up in a specific way it allows for much greater control over the ultimate characteristic of each part of the frame whether it be stiffness, light weight or an ability to soak up road bumps. This extremely labour intensive

construction technique. The carbon material is then laid up around polyurethane inserts that provide temporary structure to create the framework of the tubeset. The carbon material is able to be controlled both inside and outside the frame as it is moulded thus resulting in a frame with superb consistency and no wrinkles or excess resin.

INTRODUCING

APOLLO HI-VIZ

Apollo's HI VIZ bikes are all about safety. Each of the 5 models feature reflective decals on the frame and fork along with reflective tyres and rims. They also feature upgraded brakes for more reliable stopping power.

EXCEED RANGE

For over 35 years Apollo has been making bicycles and one particular series has become synonymous with Apollo's reputation for quality and value.

Our Exceed series.

We utilise the same performance tubing we use on our proven Apollo alloy road bikes to create a true flat bar road bike with all the performance features you would expect on a road bike, at a fraction of the price.

This season we have raised the bar and produced the lightest, stiffest and most comfortable alloy frame ever to bear the Exceed name. Each frame size is optimised to ensure responsive acceleration, effortless climbing and confidence inspiring descending.

APOLLO AND BELT DRIVE

A REAL ADVANTAGE

When these bikes are [cleaner, quieter, lighter, stronger](#) and require [less maintenance](#) what's not to like?

Bicycles equipped with belt drive are rapidly growing in popularity, as they are just so simple and easy to ride with. If you ride regularly a belt drive bike simply makes sense.

Apollo belt drive bikes are loaded with added frame features to ensure our bikes delivery class leading performance and reliability.

EUROPEAN DESIGNED ECCENTRIC BOTTOM BRACKET

Super easy to adjust to ensure correct chain line.

QUIET

So surprisingly quiet, nothing compares to the virtually silent operation of Belt drive.

LOWER MAINTENANCE

Belt-drives require no lubrication. This makes them great for the serious commuter – no more worries about greasy pant legs.

CLEANER

Carbon Drive requires no greasy lube meaning no more greasy pants or dirty hands. Belts shed dirt more effectively than a chain and can simply be cleaned with a hose.

LIGHTER WEIGHT

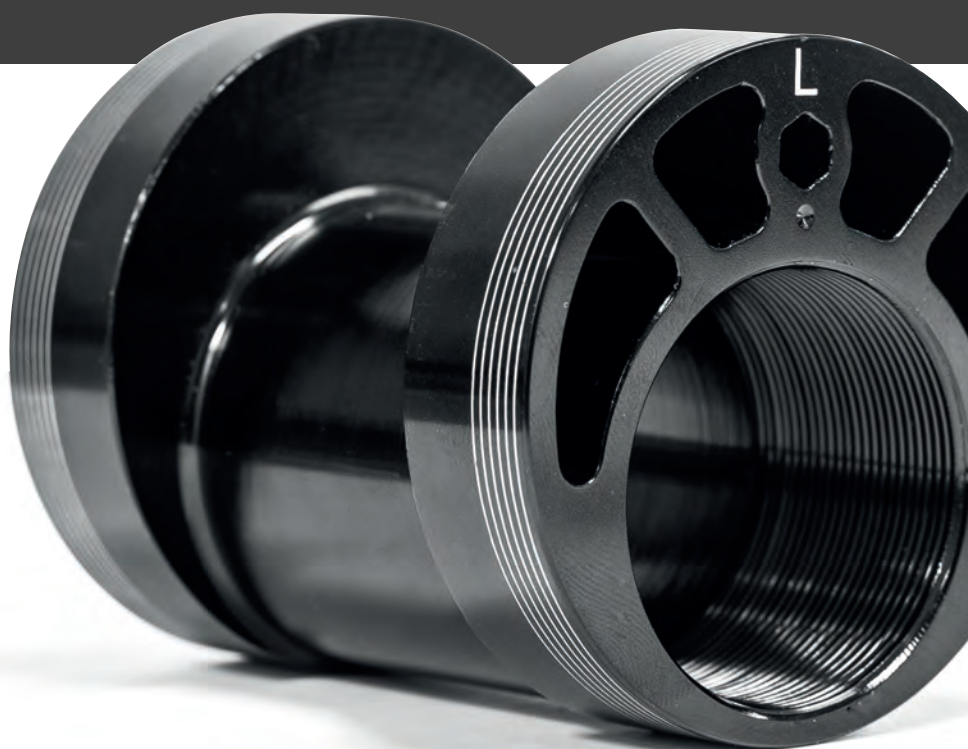

At roughly half the weight of a chain, the weight savings of belt drive simply mean riding requires less effort.

STRONGER

This instant engagement and smooth feel is unlike anything you've experienced before. Unlike a chain Belts do not stretch and have no weak joining links

LONG LASTING & ECONOMICAL

Poly carbon belts have a longer life span than steel chains, lasting somewhere in the neighbourhood of 10,000 to 15,000 km. This is significant for the hardcore, penny-wise cyclist.

TRACE RANGE

The Trace series with its agile handling comes equipped with the reliability of a weekday commuter with enough zest for adventure to tackle any weekend getaway.

More relaxed than a flat bar road bike but kitted out with increased stopping power and wider tyres, adding enough versatility to allow you to decide; Where will it take you?

CLASSIC SERIES

Classically styled bicycles were the very heart of Apollo's range in our early years. This is what we evolved from. Today, our Classic Series combines retro styling with modern componentry and technology.

Loaded with practical features such as full-length mudguards and either a basket or rear carrier, these bikes ensure that every fun-filled ride is full of style and comfort.

HYBRID RANGE

An upright and stable riding position, featuring the very best quality grips and premium saddles, ensure our range of hybrids offer inspired fun and fitness benefits as you watch the kilometres pass by in comfort.

Low stand over height, capable suspension fork combined with a range of adjustable parts to keep you rolling with ease.

Finding a bicycle that's easy to ride where comfort is a must have, not an add on extra has never been so easy.

MTB

When a real performance advantage is required, our feature loaded XC range delivers in spades.

Pure bred handling, class leading frame technology and attention to detail provide trail inspiring confidence you need to push yourself to the limit.

We are not about to pigeon hole you into one particular wheel size either. There are distinct advantages to both 29 and 27.5 wheel sizes with every bicycle engineered to take advantage of the various benefits the two platforms can offer.

Ultimately, an Apollo bicycle allows the freedom to get the best out of your riding style.

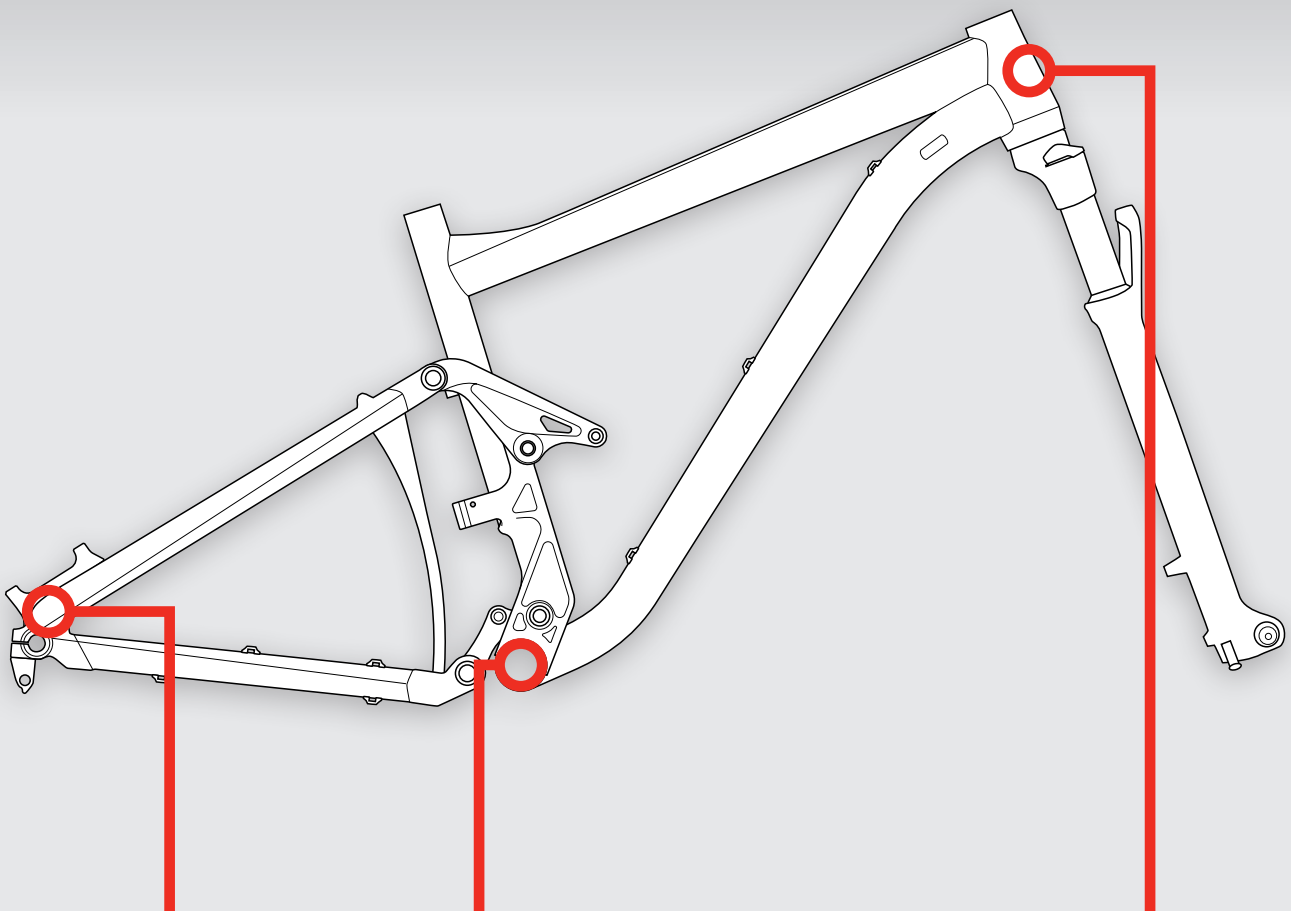

COPPERHEAD

140MM FLOATING SHOCK SUSPENSION SYSTEM

Full floating suspension design delivers the ultimate in trail-ready performance giving the rider far greater control over the way they want their suspension to function.

The beauty of this system lies in the linear travel path. The floating shock works in harmony with the system's moving parts with a suspension curve that results in a very predictable spring rate.

Straight out of the box the suspension is incredibly supple and active on small bumps, exhibits good control through the mid stroke, and precise big hit absorption. The rider has unparalleled control over the tune ability and function of the system allowing them to customise their ride the way they want.

12 x 142
THRU>AXLE
FRAME DESIGN

12 X 142 THRU AXLE

Oversized and robust Thru Axle design adds stiffness to both the frame and the rear wheel.

BB91

BB91 BOTTOM BRACKET

Press fit bearings with wide bearing placement provide additional stiffness to the crank. The bearings mount directly into the frame reducing the excess weight of BB cups. This system is compatible with any 2 piece crank set with standard diameter bottom bracket axle.

ARCTEC 9 & XPERT RANGE

29ers are easier to ride at higher overall speeds through the **increased momentum** of the larger wheel.

29ers better **absorb bumps** providing a smoother ride and more stability going over obstacles.

29ers increased wheel size **rolls over obstacles** easier

29er mountain bikes are **more stable** and less likely to waver from your riding line.

WHY 29?

High end carbon 29ers are the ultimate XC/Enduro race bike and are the fastest XC platform we have ever tested.

29ers can run slightly less air pressure without the risk of getting a pinch flat. This along with the improved contact patch of the larger tyre helps with **grip in muddy and sandy conditions.**

29ers have **fantastic momentum** once up to speed, which makes 29ers great 'do it all' bikes. Perfect for riding around town and tough enough for your favourite trails.

29ers larger contact patch with the ground ensures **improved high speed cornering.**

29ers are less likely to endo.

ARCTEC 9

TECHNOLOGY

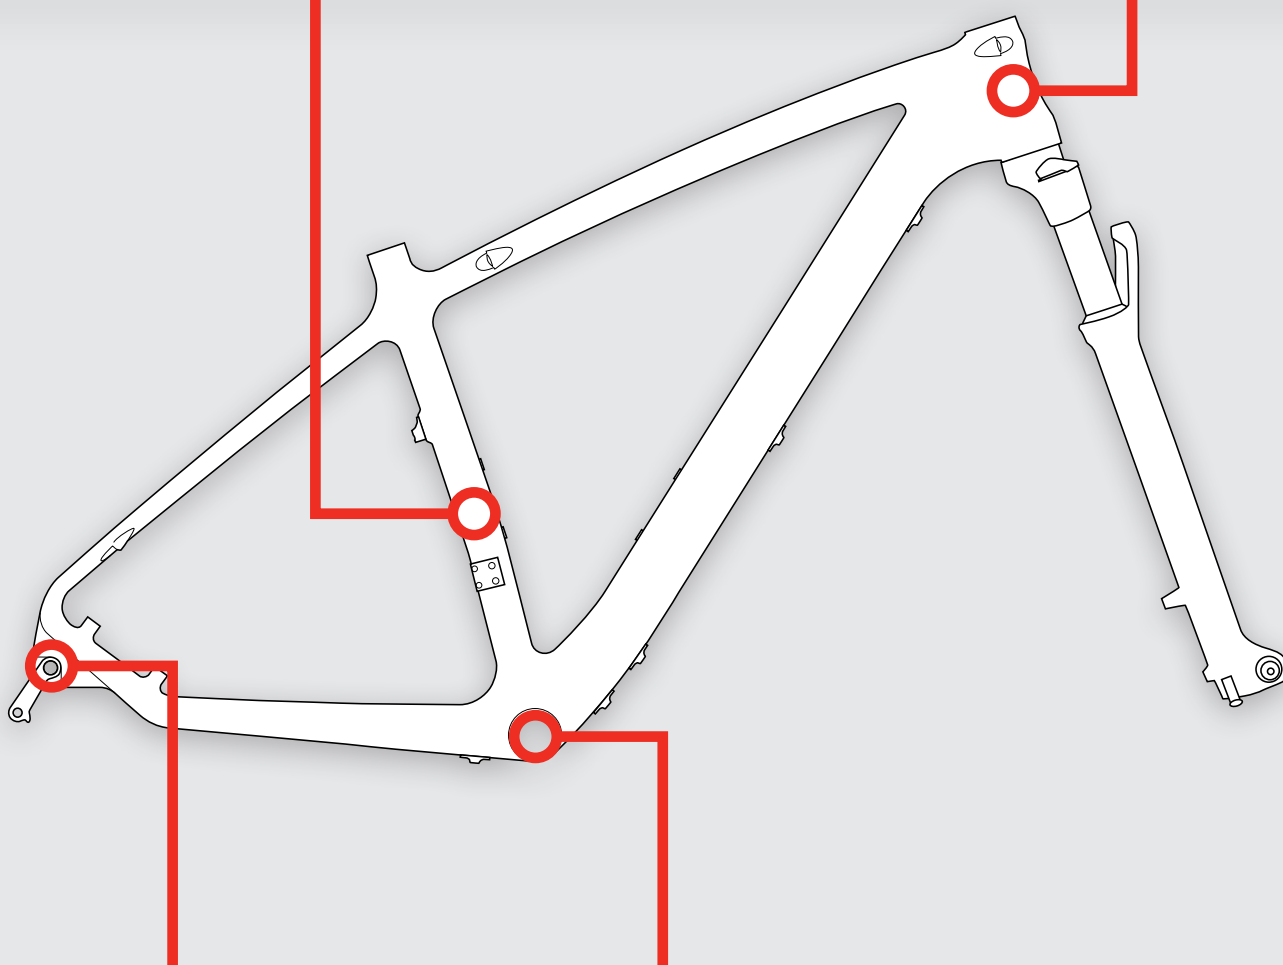

MONOCOQUE CONSTRUCTION

This construction method allows for different construction processes to be used on the chain stays and seat stays of an Apollo frame. A frame's stays are subjected to different loads and this technique ensures that each part is individually optimised to meet specific requirements.

**1.5
TAPER**

1.5 TAPERED HEAD TUBE

Increases front end stiffness and provides improved steering precision.

ASPIRE RANGE

27.5" wheels and tyres have less mass and consequently **weigh less** than their 29er counterparts. 27.5" wheels thus **accelerate faster**.

27.5" wheels have shorter spokes and smaller rims so theoretically they will build into **stiffer, more reliable wheels**.

27.5" wheels **require less braking force** to slow down. This is especially relevant to price point bikes with mechanical disc brakes.

When traveling at slow speeds and through tight turns there is much **better steering responsiveness and more agility**.

WHY 27.5?

We believe 27.5" bikes with their lighter, more agile handling are the best option for those who value playful handling and decreased overall weight.

27.5" wheels require less pedal force when climbing uphill, so they **climb better**.

27.5" bikes are easier to pop up the front wheel and flick out the rear wheel with **more playful handling**.

27.5" bikes will never be described as "handling like a tractor".
